Summary

Intune is well set up and has grown over three years. Policies sit side by side in three generations, nine contradict each other, and two update rings target the same group. Six apps run in versions from 2025. The compliance policy requires BitLocker but does not check the patch level. Recommendation: consolidate, Windows Autopatch for Windows and Microsoft 365 Apps, a monthly plan with three rings.

Findings by area

AREA	FINDING	SEVERITY	RECOMMENDATION
Updates	Rings Pilot and All both target All devices; deadline 0 days	**High**	Three rings through Autopatch groups, deadlines 2, 5 and 10 days
Apps	Reader, 7-Zip, VLC and three business applications without an update since 2025	**High**	From the Enterprise App Catalog with auto-update, business applications repackaged as Win32
Policies	9 conflicts, for example a different BitLocker method in two profiles	**Medium**	One policy per purpose from the settings catalog, baseline 25H2
Compliance	Patch level and Defender status are not checked; 40 devices without contact for over 30 days	**Medium**	Add patch level and Defender to compliance, grace period 5 days, clean up inventory
Apple	Push certificate expires on 3 December 2026	**High**	Renew with the same Apple ID, date in the monthly plan

Monthly plan, proposal

- Patch Tuesday plus 1: pilot ring (12 devices from IT, finance, sales). Patch Tuesday plus 4: broad ring. Patch Tuesday plus 8: late ring and report to IT.
- Apps: catalog apps automatically, business applications after approval by their contact, each first in the pilot ring.
- First week of the month: monthly report, policy review, inventory clean-up.
